GRADED PFD SIZING

Stohlquist's graded sizing offers the best fit, and lowest footprint possible, for the widest range of body types. They have fine tuned each individual size, and sculpted the foam footprint and foam thickness to provide a better fitting, and more comfortable PFD for people of all sizes. This allows them to fit young, smaller framed boaters up to larger adults in the same style vest, while offering identidal mobility and low-profile fit across the size range.

HOBIE MIRAGE PFD

This PFD was designed specifically for Vantage high back seats on Hobie Mirage Kayaks. The flotation in the back is thin for more comfort while seated and helps to prevent the vest from riding up as you pedal. A vent along the spine adds to the comfort. Front zip entry for easy on and off. Large pockets on the front for easy storage and access of small items. High waistline cut so the vest does not ride-up while pedaling. Huge arm cutouts and the short waist allow excellent freedom of movement. Adjustable side straps offer enough size variation for many layers underneath or none! Reflective tapes for visibility during low light conditions. Back logos vary between "H" and Penguin Logo.

SAFETY TIP

LIFE VESTS: Get a good, comfortable life vest and WEAR IT! A life vest does you little good stored on your boat, especially if you get tossed into the water and away from your boat. Accidents happen and by their nature, they happen when you are not prepared. A life vest can keep you afloat until you can rescue yourself or you can be rescued by others. In the worst cases when injuries or cold water are involved, your life vest can make all the difference! Be sure everyone onboard your boat wears a life vest too! Pass the word! Federal law now requires that all persons below the age of 13 must wear a life jacket while aboard a boat.

TECH TIP!

TRAPEZING: While sitting on the edge of the boat, attach the trapeze dogbone to the trapeze hook on your harness. Grab onto the trapeze wire's handle with your forward hand. Place your other hand on the hull behind you. Using your hands for balance ease yourself off the side of the boat and place your forward foot on the rail. Push yourself away from the boat with your rear hand and forward foot till you can place the rear foot on the rail. Stand on the rail of the boat with your weight on the trapeze wire. Keep your forward leg more ridged and aft leg slightly bent. This position will help keep you from falling forward.

While learning to trapeze, beginners should set their trapeze height just at the rail level or slightly above. This will make it easier to get in and out. Keep your legs spread several feet apart for balance. As you get used to the feel of trapezing you can begin to lower your trapeze height and move your legs closer together. Once you become an expert on the trap wire, your proper body position should be parallel to the deck with your feet right next to each other.

REMOVABLE SHEAVE TRAP RIG BLOCK

This is the block we include in our basic trap rig kits. No need to cut wires to install this block. Simply remove the clevis pin that acts as the sheave axle, slide the sheave out of the frame, place the frame through the trap wire thimble and reinstall the sheave.
3103 Each $8.69

61530000 Each $3.99

HOBIE WAVE

TECH TIP!

SPINNAKERS: Flying a spinnaker is one of the great thrills of sailing. And one of the great challenges for both skipper and crew. Spinnakers increase downwind speed while actually creating lift at the bows! Few things compare to the thrill of running off the wind under a huge and colorful spinnaker! Spinnakers require special rigging. A survey of the products on these pages will give you a good idea of the options available.

HOBIE 16 FURLING GENNAKER SYSTEM

Increase your off-the-wind sailing performance with this pole-mounted furling gennaker. A large reaching genoa attached to a furling drum mounted on a pole which moves the sail area further forward like a spinnaker, but furling for easy deployment and retrieval.

UNIVERSAL BATTENS

Availability of the correct batten has often been a problem. The various models of Hobie Cats all use different batten and taper lengths. In earlier years, each model Hobie used a different color batten. The battens were all the same specification, just a different color. We now stock only white sail battens for all models.

Complete battens sets, cut and tapered to specification length are available for some models. Individual battens are filled from stock as shown in the following table. Batten numbers start from the bottom batten in each sail (#1). Battens are trimmed by purchaser to exact length. Stock batten lengths are shown in the illustrated Hobie parts pages. (T)=Tapered

SAIL CARE: At the end of the day most cat sailors roll their sails on the lower batten or around the boom. If you do, roll your sail loosely. Any sharp bends in the sail cloth break down the resin coating on the cloth. This weakens the cloth leading to premature stretching or pin size holes that will grow. You can lengthen the life of your sails with careful handling and by using some of the special accessories we offer. The various tapes and sleeves we offer are all intended to protect the sail from sharp edges and abrasive areas on the boat that wear away at the sail's fabric until suddenly there's a hole and next a tear. It's never too late to slow down wear and tear.

SUPER JIB BATTENS

Work your jib with greater ease. Light and limber fiberglass battens virtually eliminate hangups when tacking the Hobie 16 and give your jib superior shape in light air when you need it most. Increases drive compared to the stock jib battens. Not class legal for racing but so nice to use the rest of the time. Complete with end caps.

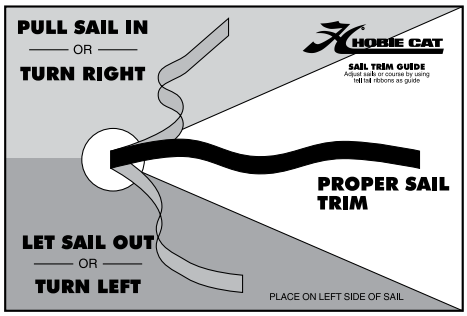
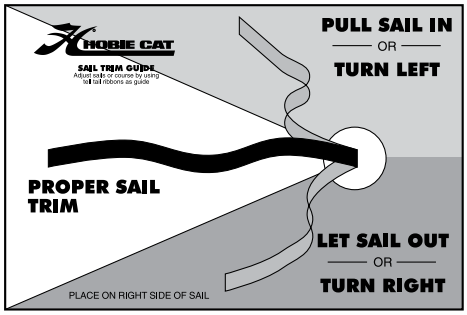
TECH TIP!

WIND INDICATORS: When sailing downwind, without a bridle fly, you can't gauge apparent wind direction without looking up and taking your attention off the action (boats crossing) on the water. The light weight indicators are most suitable in moderate and stronger wind conditions. Not severely affected by wave action, they work well tacking downwind. They are both durable and sensitive. The heavier Telo Cat is the most durable. It stands up to crashing waves sailing in rough conditions. Mast head indicators excel at detecting wind shifts and velocity changes. The bridle fly is the best when sailing off the wind, especially in light and moderate air.





WINDTRONIC2 WIND METER

The cup principle eliminates the cumbersome need of orienting the device as measurements are obtained irrespective of wind direction. Clearly Legible Display, The large LCD display shows the following readings: Current wind speed, Max. wind speed (MX) Average wind speed (AV) Bar graph of current Beaufort values. Selectable Units: By a simple push of a button you may select one of the following units: KM/H (Kilometers/Hours), KTS (Knots), M/S (Meter/Second), MPH (Miles/Hour). Manual or Stationary Operation: An integrated tripod thread allows you to make temporary stationary use of Windtronic 2. Accurate Readings: A combination of precision mechanics and quartz-controlled electronics guarantees the highs level of accuracy over the entire temperature range. Minimal Energy Consumption: A standard lithium battery will supply your wind meter with power for approximately 10 years. After that time, you can simply replace the battery yourself. Precision made, the Windtronic 2 is a German anemometer. It gives readings for current, average and maximum wind speed in a choice of Kmph, mph, m/s or knots with a Beaufort scale on the left of the screen. Water resistant. Comes with belt carry case. 2 year warranty.

HOBIE TRAMPOLINES

We've got what you want and it's in living color! All of our HOBIE trampolines are heat welded rather than stitched for the ultimate in longevity and easy maintenance. There is no potential of UV degradation of thread or loose thread unraveling an entire seam. This is a HOBIE exclusive, longer lasting by far!! All include halyard pocket. Note: Hobie Class Association racing requires the Hobie Cat factory supplied trampoline. See parts Guides and parts list for trampolines & available color options.

HALYARD POCKET ON ALL TRAMPOLINES

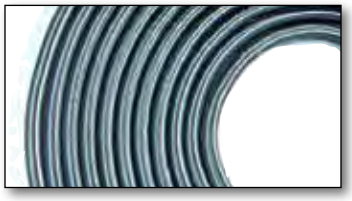
TRAMPOLINE DOUBLE GROMMET KIT

Hobie Cat doubled the number of grommets across the rear of the trampoline in 1983 to reduce stress and strengthen the trampoline. This kit includes 24 spur grommets and installation tools. Buy an additional 24 grommets to do the center lacing.

2061 COMPLETE KIT $38.99
2062 24 GROMMETS $9.99

TECH TIP!

HOBIE TRAMPOLINES: Hobie trampolines are the best! We use heat welded vinyl in all of our trampolines to create the strongest and longest lasting trampolines on the market! Others stitch their trampolines. That stitching breaks, unravels and rots! It also weakens the trampoline material by poking holes in it! With heat welding, this does not happen! All of our trampolines are triple reinforced at all stress points including the corners and webbing grommets. We make our trampolines in either solid vinyl or mesh vinyl. Our vinyl trampoline is dryer, while the mesh will allow the wind and water through.



TRAMP LACING KIT

Many sailors prefer lacing their trampoline with shock cord. This kit includes three pieces of 3/8" nylon covered black coated nylon shockcord and 12 clamping rings. Fits the H14, 16, and 18. Not shown.

TECH TIP!

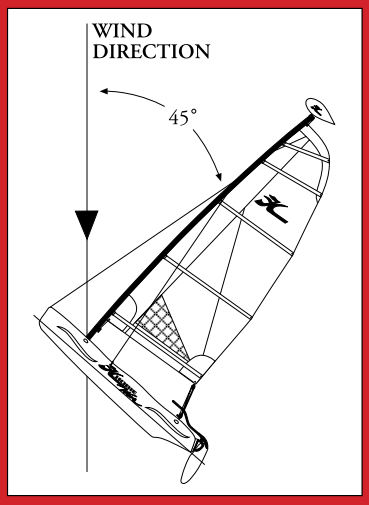
RIGHTING YOUR HOBIE: On that reach...flying through the air and water then...WHAM!!! Your Hobie Cat has forced you to swim instead of sail. Not really what you had in mind? if you have planned ahead you will be up and sailing again quickly. Whether sailing single handed or with a few friends, righting your boat can be quick and easy...

First, preventing your mast from becoming one with the bottom, or "turtling" is a priority. We at Hobie have designed mast floats to help keep your Hobie Cat from becoming a 'mudhen'. The floats attach to the top of your mast and will prevent the mast tip from sinking.

The next objective will be to get back to sailing! Righting systems vary a bit, but the theory is the same. A line is attached to your Hobie, thrown over the hull in the air and then weight (yours and or your friends) is used to lever the boat back to an upright and sailable position.

After you have checked that everyone is OK, turn your hulls and mast into the wind (see diagram) and uncleat your sails. You and your friend now need to congregate on the hull that is in the water. Grab the righting line, lean away from the trampoline and get as close to the water as you can. Try to stay out of the water. If you don't have enough body weight to right the cat we have the Righting Bucket! Just attach it to the boat, with the hook that is provided, throw over the upper hull and fill the bucket with water! With the bucket strap over your shoulder, lean your weight out from the boat. The bag comes clear of the water and up the cat will come!! Grab the dolphin striker or crossbar as it comes up, climb aboard, sheet in and GO!

Tipping your Hobie over can be a great way to cool off and enjoy the water... try it! It's excellent practice for when you weren't planning to go for a swim but your Hobie decided that you needed to cool off!



MAST FLOAT "BABY BOB"

30115 "Baby Bob"

(Standard on the Wave) Designed by the Hobie Cat team to offer the safety and security of mast head flotation while limiting the resistance (drag) through the air. If you capsize, the Hobie mast float can give you the time you need to prepare to right the boat without the worry of going turtle (mast straight down). This also helps prevent damage to your rig and sails that can be caused if the mast comes in contact with the bottom when capsized. This mast float is standard on all Hobie Waves. Great for Hobie 14 and Hobie 16 as well as others with mast head castings capable of bolting in a similar fashion. It is fixed in position to the mast head and rotates with the mast. Displaces 32 pounds of water and measures 1/2 cubic foot in volume. Bracket mounting allows easy removal for racing or trailering. Kit includes mounting brackets and fasteners.
30115 WAVE, H14, H16 $129.00

MAST FLOAT "MAMA BOB"

"Mama Bob"

Offers more flotation volume while using the same bracket mounting system as the Baby Bob shown above. Displaces 59 pounds of water (just under 1 cubic foot in volume). Mama Bob has nearly the same vertical dimension as the Baby, but it is wider. More volume further inhibits a boat from going turtle when capsized in rough and windy conditions. This is standard on the Getaway due to both weight and trampoline area which pushes the mast downward with more wind force when capsized. Extra volume, extra safety margin! Kit includes mounting brackets and fasteners.
30119 GETAWAY $149.00

UNIVERSAL MAST FLOAT

"Mama Bob" float incorporating a universal attachment system to fit a wider variety of mast configurations. This is a shaft mounting system originally conceived for the Hobie 21 Sport Cruiser. Can attach to any mast. Helps to prevent turtling, displaces 59 pounds of water to help keep the mast from going full turtle (mast straight down). The Hobie mast float will give you the time you need when preparing to right the boat without the worry of going turtle. It also helps prevent damage to your rig and sails that can be caused if the mast head contacts the bottom when capsized. This streamlined float is shaft mounted to the side of any mast and is easily removed for racing or trailering. This float is contoured and held in alignment with the mast for minimum drag while sailing. Includes shaft mount hardware and fasteners.

EPO3 RUDDER BLADES

This third generation rudder the EPO3 combines the original shape of the EPO2 rudder with an improved trailing edge. We developed the EPO3 rudder blade as the next generation performance rudder blade for the 14, 16, 17, 18 and 20. With this proven foil shape and a fine trailing edge, the EPO3 offers reduced cavitation with smoother, more forgiving control. The EPO3 rudder is stiff where it counts due to its hand laid fiberglass construction incorporating extra cloth for longitudinal stiffness. We have placed extra glass in all the right places to ensure that it is tough enough for the most demanding sailors using extreme mast rake. You will experience supreme performance and handling not found with other rudder blades. White EPO3: Gucci looks, stiff and light weight.

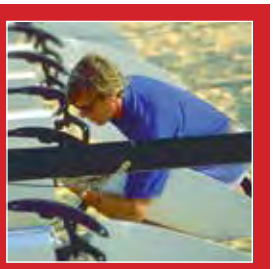
TECH TIP!

RUDDER RAKE



Excessive weather helm (when you must pull hard on the hiking stick to keep the boat from turning towards the wind) can be corrected by cocking the rudders farther (forward) under the boat. If you have too much lee helm (very little pull on the hiking stick, with the boat tending to turn away from the wind), this is corrected by unscrewing the adjustment and cocking the rudders back (aft). The amount of rudder rake needed depends on how far back the mast is raked and how much weight is being carried. The biggest problem with rudder adjustment is when a skipper changes the blade adjustment screw without reseating the cam plate in the upper casting. Even a very minor adjustment to the rudder could cause the cam to lock partially rotated, dramatically reducing the kick-up resistance. That means every time you make a blade rake adjustment, you must also reseat the plate AFTER you have finished adjusting the blade rake.There are three very important adjustments that should be made to the rudder assembly.

1. The rudder rake screw which adjusts blade angle.
2. The cam plate bolt which holds the blade forward.
3. The cam tension screw which adjusts kick-up tension.

When system adjustments are made improperly, the system won't work right. You must follow these steps in order!

1. Lift the rudder arm to unlock the assembly.
2. Using an allen wrench, adjust the rudder rake screw to give the desired rudder blade angle (rake).
3. Make sure that the blade is seated forward against the adjustment screw, loosen the cam plate bolt and lock down the assembly. Slide the plate back a little and then forward as far as it will go up into the cam. Retighten the bolt with a 1/2" socket.
4. Adjust the kick-up tension screw with a screw driver. You can calibrate the tension with a fish scale by making a loop of rope and putting it on the rudder blade about 24" down from the front bolt hole. Hook the scale to the loop and pull. Factory kick-up tension is set between 18-22 pounds.

LOCKING GUDGEON SCREWS

No more re-tightening gudgeon screws. As of 1996, Hobie Cat changed gudgeon screws on all new boats to "long lock" screws. Similar to a Nylock Nut, this screw has a nylon insert almost the full length of the threads. The nylon insert screws into the aluminum transom plate and provides the same resistance to movement that the nylock nut does.

HARKEN 2 1/4" BLOCK LOW PROFILE 6:1

Successful racers have gone to super low profile systems on Hobie 16's (6:1) and 18's (7:1). This allows the sailors to achieve more mast rake for better pointing ability and reduced pitch pole tendency. They are using the Harken 2 1/4" ratchet block and boom blocks with 3/8" line. The lower block is customized to allow the post to enter the traveler car hinge plate on the Hobie 16. To convert to 7:1, H18 sailors add a mini-block to the eye that's normally used to tie off to and then tie the line off on an empty boom bail.

New Hobie 16s come with H194
Lower ratchet and H2640 Carbo upper.

H2640* UPR 40mm CARBO $117.60
H153* UPR 2.25" BLOCK $151.10

*use 3/8" sheet rope for smooth flow of line through blocks.

H125 MINI BLOCK (to 7:1) $29.35

Note: add 8' to sheet rope length when converting to 7:1 system.

TECH TIP!

BOAT CHECK LIST
There are a number of items to check on your boat. Do this on a regular basis and before sailing for the first time each season. Here are a few of the basics...

STANDING RIGGING (wires)
Check for broken strands. Inspect and slightly bend at all fittings to find broken strands (replace if needed). Check all clevis pins and keepers.

HARDWARE
Check for bent or damaged shackles and other components.

LINES
Check for wear.

HULLS
Check for leaks and possible structural problems. Delamination of the hull structure could lead to major failure.

MAST
Check mast and all aluminum spars for corrosion and other damage.
Corrosion can cause structural failure.

RUDDERS
Check the cam lock-down system. This should be free of dirt and sand.
Grease regularly to allow free rotation motion.

DRAIN PLUGS!
Need we say more.

HOBIE TWIST AND SEAL HATCHES

TWIST AND SEAL HATCHES have a better seal. The lids also hinge open, so you never lose the lid. Designed with a cork-screw-like mechanism for closure, a simple twist of the handle opens or closes the hatch. As the screw pulls down the hatch, you get a tight seal on the "O Ring". The round hatch seals around the edge of the cylinder and does not have to be held down against a flat surface to seal. This allows the hatch to seal even if the lid is partially open or tipped. Flip the handle into the recess to "lock" it closed. Available in 6" and 8" diameters. *Retrofit kits include gaskets (and 2 ea #8031130 screws for the 8").

TECH TIP!

HATCH COVER KITS: The small, 4" diameter, covers are hand sized and are often used behind the rear crossbar for access to the transom. The 5:" diameter hatch covers are about the maximum size that the Hobie 14 and 16 foredeck can handle. The 6" access port kit is now a screw-in port, just like the 4" and 5". Prior to 1989, Hobie Cat used a pop-in port on the Hobie 18. Water would seep into the hulls through the rope-handle holes. Replacement with the screw-in ports eliminates that condition.

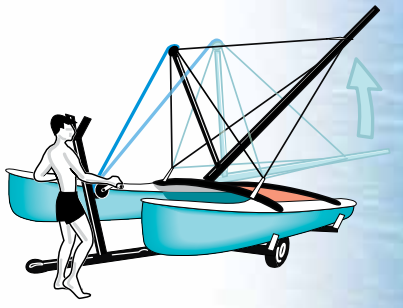
HOBIE MAST STEPPER III

Speciffically designed for the Hobie Getaway due to the rotated mast position when stepping. Step your mast with ease and safety. Specially designed bracket attaches to mast at base. A pole plugs into the bracket to create a gin pole arrangement that allows you to singlehandedly raise and lower your mast. It uses the trailer's winch (not provided) for power. Lines snap in place to eliminate side-to-side sway. Attaches quickly without tools. No modifications to boat. Can adjust to fit other rotated-position stepping masts. May also be modified to work on Hobie 17, Tiger and 20 (no instructions are provided for this modification).

3156 HOBIE MAST STEPPER III
$239.00



TECH TIP!

MAST STEPPING: Usually a two person job. For those days you need help, want to single hand or be able to rig the boat alone for any reason, a mast stepping aid is what you need. The primary function of a mast stepping aid is to raise the mast while restraining side movement induced by a cross wind. Often it is more difficult to handle the side motion than it is to raise the mast. It's the side motion that breaks or bends the hinges and/or mast base castings.

UNIVERSAL COVERS

This is designed to fit a variety of boat lengths, cut into general catamaran shape. It's made of tough woven polyethylene that is coated on both sides, one side silver, one side black. We've chosen this polyethylene because of its excellent resistance to ultra-violet degradation. It is a woven rather than sheet fabric to provide great tear strength. These covers will tolerate sun, wind, rain, high and low temperatures, and not fall apart. This fabric was specially designed for outdoor application. Install with silver side out.

Each cover is cut to be used for a boat length range. Tapes are sewn in place to allow you to secure the cover around the hulls and crossbars. Custom features such as cut outs or slits for wires or wings can be created with scissors. The edges will not catch, fray, or pull. We include 5 feet of adhesive backed velcro with each kit to be used to prevent slits from flapping in the breeze.

These covers are not designed to be used while trailering.

TECH TIP!

Covers: Protect sails and hardware from sun and abrasion damage. Perhaps the greatest enemy of many modern fabrics is the sun's ultra violet radiation. It deteriorates nylon unless it's specially treated and it attacks dacron sail cloth and weakens it. Fortunately, nylon can be treated to make it UV tolerant and acrylic fabrics exhibit seemingly endless resistance to UV radiation. These sail bags and sail covers can be used to protect your dacron sails from UV radiation damage.

SNORKEL JIB COVER

Easy to install and remove—the Snorkel is a must for protecting your expensive sail from eventual destruction by the elements. The Snorkel is a zip-on cover for roller-furled jibs.
