

The Third hand is designed to hold a standard or extendable tiller in a fixed position. For attachment to main traveler tracks on the Hobie 14,16 or 17.

Directions for Installation

1) Note the machined "T" lock fitting. When inverted and placed into the track, the "T" is then rotated to lock into the track.

2) Remove the "T" lock fitting from the assembly. Place in the track at the desired position (outboard, in the track) rotate the "T" to lock and tighten the nut as shown.

3) Place the desired tiller grip sized fitting onto the assembly and slide over the "T" lock bolt with the tiller grip's bolt in the track, or to one side, to obtain the proper angle for the tiller. Tighten the tiller grip bolt / nut. Tighten the "T" lock bolt / nut to hold in the desired position. Repeat for opposite side.

4) Optional attachment system. The provided screws can be used to attach the tiller grips in other locations. Drilling will be required. Use a bit that is slightly smaller than the screw provided.

Revised 6-9-2009

#204 THIRD HAND - Tiller Holder
