

All anglers know the importance of presentation. With the wind blowing, the ability to get your bait in just the right spot can be a daunting task. The use of the Hobie Drift Chute will enable you to control your boat so that you can harness your energy and use it where it counts most – fishing.

Used in combination with Hobie's Anchor Trolley Kit, the Hobie Drift Chute will enable you to angle yourself in just the right position (see diagram).

Installation is fast and easy.

Tie a line to the pre stitched loop in the drift chute.

Determine the angle of attack that you want your boat to face.

Lash the other end to a predetermined anchor point on the boat i.e. anchor cleat. **CAUTION** –Never tie a knot that you will not be able to remove in an emergency. Always use a system that will be easily removable.

* If used in combination with an anchor trolley repeat the steps above and place the rope in the clasp provided in the anchor trolley kit.
