

Mirage Drive Seal Installation Instructions

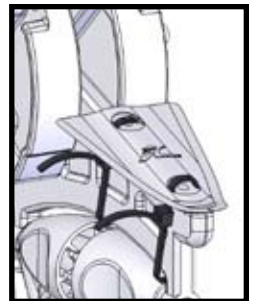

1. Set Mirage Drive seal over the top of the rear of the mirage drive spine. Notice how the shape of the seal will sit along the profile of the spine. Feed the zip ties through the slots on the seal so that the locking box on the zip tie will sit underneath the seal when installed.

2. Feed the zip tie down the other slot on the top of the seal and slide the end between the sprocket fairings and the spine itself.

3. Insert the end of the zip tie through the locking box and start to pull it tight. If you don't hear the zip tie clicking, you need to turn the zip tie around so that it feeds in correctly. Before tightening the zip tie completely, make sure that the seal is seated properly on the spine and the locking box on the zip tie is tucked up against the underside of the seal. Now pull the zip tie tight and trim off the excess zip tie that is sticking out of the locking box.
